Abstracts

According to our (Global Info Research) latest study, the global On-Site Gas Production market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

On-site gas production is generally a one-to-one customized solution, or a small and medium-sized on-site gas production device designed to meet customers' changing needs for continuous and reliable gas supply at any time, or a 10,000-ton large-scale highly integrated system for ultra-large-scale customers system. The on-site gas production mode is not restricted by transportation, and there is no clear sales radius. Enterprises engaged in on-site gas production are enterprises with certain capital and technical strength in the industry, mainly including foreign-funded giants, domestic-funded professional other production enterprises and some air separation equipment manufacturers.

Oligopoly of large-scale on-site gas production projects, and low concentration of small and medium-sized projects. The on-site gas production business has relatively high entry barriers, and requires relatively high financial strength, operating experience, and brand awareness of participants. The market for large-scale and high-end on-site gas production projects presents an oligopolistic competition pattern. Small and medium-sized gas production projects (below 20000Nm³/h) market concentration is relatively low, and it is also the main target market for new entrants.

The Global Info Research report includes an overview of the development of the On-Site Gas Production industry chain, the market status of Steel (Bulk Gases, Specialty Gases), Petrochemical (Bulk Gases, Specialty Gases), and key enterprises in
