According to our (Global Info Research) latest study, the global On-site Installation and Commissioning Services market size was valued at US\$ 9528 million in 2025 and is forecast to a readjusted size of US\$ 13557 million by 2032 with a CAGR of 5.2% during review period.

On-site installation and commissioning services refer to the professional technical services provided by a company that completes the entire process of equipment installation, mechanical assembly, electrical wiring, software configuration, system integration, functional testing, performance verification, trial operation, and final acceptance and delivery of equipment, systems, or engineering projects at the customer's site. Its core objective is to ensure that the product or system operates normally and achieves the expected performance indicators according to design specifications, safety standards, and customer requirements after the equipment is manufactured. This service is widely used in industrial manufacturing, energy and power, oil and gas, semiconductors, communication networks, rail transportation, medical equipment, construction engineering, automation control, data centers, and new energy fields. It is typically provided by equipment manufacturers, system integrators, engineering contractors (EPC), professional technical service companies, or third-party engineering service organizations, and is a crucial link between equipment delivery and formal operation.

With the continued growth of global investment in industrial digitalization, intelligent manufacturing, energy transition, and infrastructure construction, the on-site installation and commissioning service market is showing a stable expansion trend. On the one hand, the increasing number of large-scale projects such as wind power, photovoltaics,

energy storage, nuclear power, hydrogen energy, data centers, semiconductor factories, and smart factories is driving a sustained rise in demand for highly skilled installation and commissioning engineers and system integration services. On the other hand, the application of industrial automation, the Industrial Internet of Things (IIoT), digital twins, remote operation and maintenance, and artificial intelligence technologies is gradually transforming installation and commissioning services from traditional manual models to digital, intelligent, and remote collaborative models. In the future, as the complexity of global equipment increases and customers' demands for equipment reliability, operational efficiency, and rapid commissioning continue to grow, installation and commissioning services will evolve from simple engineering execution to a high-value-added technical service market encompassing digital verification, predictive maintenance, remote expert support, and full lifecycle operation and maintenance management, demonstrating strong long-term growth potential.
