## Abstracts

According to our (Global Info Research) latest study, the global On-site Safety Management Services market size was valued at US\$ 1095 million in 2025 and is forecast to a readjusted size of US\$ 1650 million by 2032 with a CAGR of 6.1% during review period.

On-site safety management services are comprehensive, professional safety control services tailored to specific work sites. At its core, these services identify, control, and eliminate personnel, equipment, environmental, and management risks at the work site through systematic risk assessment, policy establishment, process monitoring, and emergency response. This prevents accidents and protects personnel health, assets, and operational compliance. The services are integrated throughout the project, including developing safety plans and procedures, implementing safety education and training, conducting daily inspections and hazard identification, supervising high-risk work permits, managing personal protective equipment, and organizing emergency drills and accident investigations. This service aims to 'on-site' and 'operationally' apply the professional requirements of safety management, building a proactive safety protection system. It is an indispensable professional support for fulfilling corporate responsibility for safe production and achieving sustainable development.

The on-site safety management service market has a stable outlook and continuously increasing demand, evolving from a 'compliance-driven' model to one that emphasizes both 'value-driven' and 'risk-driven' approaches. The core growth drivers stem from three factors: First, increasingly stringent national safety production policies and regulations, coupled with stricter accountability, necessitate that enterprises leverage professional services to meet legal requirements and mitigate significant legal and

reputational risks. Second, the trend towards larger and more complex engineering projects, with their inherent high-risk nature, makes professional safety management a crucial guarantee for project success. Third, 'technology-driven safety' has become a clear trend, with 'smart safety' services that deeply integrate technologies such as the Internet of Things, drone inspections, AI video behavior analysis, and digital twins with traditional management creating substantial new market growth. In the future, professional organizations capable of providing integrated 'management + technology + data' solutions and possessing cross-industry and cross-regional service capabilities will dominate the market.
