Abstracts

According to our (Global Info Research) latest study, the global On-Vehicle Battery Case market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Along with the optimisation of the structural design of new energy vehicles and the improvement of battery technology, battery and vehicle enterprises have interacted and cooperated, with battery enterprises optimising the structure of the electric core and developing higher energy and volumetric power density electric cores, and vehicle enterprises developing chassis structures without battery boxes in order to optimise the layout of the vehicle and lightweighting, and to improve the overall safety, gradually promoting the revolutionary improvement of the battery layout of electric vehicles. In order to optimise vehicle layout and lightweighting, vehicle OEMs have developed a chassis structure without a 'battery box', which has gradually promoted the revolutionary improvement of EV battery layout, and the battery box-less technology solution represented by CTC has emerged. Driven by the demand for vehicle lightweighting and comprehensive safety enhancement, around the battery layout area, intermediate structures such as modules are removed, and the layout of the attachment system is optimised to save space and fit more electric cores, thus providing the possibility of improving the vehicle's range; based on the integrated design of the chassis structure, the protective structure system for the battery is constructed through the use of a large number of high-strength steels to improve the impact-resistant

capability of the battery portion while lowering the vehicle's overall manufacturing cost. The impact resistance of the battery part is improved.
