Abstracts

The global Oncolytic Virus CDMO Services market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Oncolytic virus CDMO service is a customized service provided to customers for the development and production of oncolytic virus vectors.

Oncolytic viruses (OVs) therapy is a new approach to treating tumors, which works by directly killing tumor cells and inducing the body's immune response. However, natural oncolytic viruses have certain limitations. Therefore, various viruses need to be used as vectors to enhance or weaken viral virulence through genetic modification and introduce new functional genes to improve their oncolytic effect. Currently, herpes simplex virus, adenovirus, vaccinia virus, vesicular stomatitis virus, measles virus, mumps virus, polio virus, etc. can be used as oncolytic virus vectors. These viral vectors can target and kill different tumor cells through different genetic modification methods, achieving better oncolytic effects.

Oncolytic virus CDMO services can accelerate the R&D and production process of oncolytic viruses, provide customers with high-quality oncolytic virus products, and promote innovation in the field of tumor treatment.
