According to our (Global Info Research) latest study, the global One-Cell Permeability Test System market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The One-Cell Permeability Test System is a laboratory method used to evaluate the permeability of cell membranes. This test system is commonly used in drug development research to measure the ability of potential drug compounds to cross cell membranes and enter cells. The test involves growing cells on a membrane barrier and exposing them to a solution containing the drug compound. By measuring the amount of the drug that passes through the cell membrane over time, researchers can assess the drug's ability to permeate cell barriers and potentially be effective in treating diseases.
