The global One Color Shoe Injection Molding Machine market size is expected to reach \$ 281 million by 2032, rising at a market growth of 3.8% CAGR during the forecast period (2026-2032).

A one color shoe injection molding machine is a type of equipment used in the manufacturing of shoes. This machine is specifically designed to inject a single color of material into a mold to create the desired shoe shape. The process involves heating the material to a liquid state and then injecting it into the mold cavity under high pressure. Once the material cools and solidifies, the mold is opened to reveal the finished shoe product. One color shoe injection molding machines are commonly used in the production of various types of footwear, including sneakers, sandals, and boots. These machines are efficient and precise, allowing for high-quality and consistent results. They are also versatile, as they can be used to create a wide range of shoe styles and designs. Overall, a one color shoe injection molding machine is an essential piece of equipment for shoe manufacturers looking to streamline their production process and create high-quality footwear products.

In 2025, global One Color Shoe Injection Molding Machine production reached approximately 7,182 units, with an average global market price of around US\$ 29,100 per unit.

The upstream supply chain for a One Color Shoe Injection Molding Machine includes component suppliers providing hydraulic systems, servo motors, injection barrels and screws, precision mould bases, electrical control panels, PLC systems, sensors, heating and cooling elements, as well as steel and metal structural parts; midstream involves equipment manufacturers that carry out mechanical processing, assembly, circuit

debugging, performance testing, and quality certification of the whole machine; downstream customers mainly include shoe sole manufacturers, footwear OEM and ODM factories, and shoe production enterprises, which use the equipment to mass-produce single-color soles for daily footwear, sports shoes, slippers, and safety shoes, and ultimately supply to consumer markets and brand distributors.

The cost structure of a One Color Shoe Injection Molding Machine is dominated by core hydraulic and transmission components, accounting for 35% to 45% of the total cost, followed by electrical control systems including PLC, drivers and sensors at 15% to 20%; mechanical structural parts and precision machining account for about 18% to 25%, while assembly labor, factory testing and commissioning account for 8% to 12%; the remaining portion covers R&D amortization, logistics, packaging, factory overhead and after-sales support costs.
