According to our (Global Info Research) latest study, the global One-Line Spot LiDAR market size was valued at US\$ 284 million in 2024 and is forecast to a readjusted size of USD 395 million by 2031 with a CAGR of 4.9% during review period.

The linear spot pure solid-state lidar innovatively uses a line spot infrared laser light source to replace the traditional point light source, and combines it with a high-performance single-photon avalanche receiving chip. By optimizing the optical design of the transceiver and the anti-ambient light algorithm, TF-NOVA can stably measure black, high-brightness and small targets under strong outdoor lighting. Unlike single-point lidar, it is similar to a straight line. Compared with traditional laser scanners, it has obvious advantages in size, weight, power consumption and cost performance. It is especially suitable for applications that require a certain detection field of view range.
