A one-piece water cooling radiator is a component commonly used in liquid cooling systems for computers, especially in gaming PCs and high-performance workstations. This radiator is designed to dissipate heat generated by the computer's central processing unit (CPU) or graphics processing unit (GPU) by circulating a liquid coolant through a network of small tubes and fins. The one-piece design typically includes an integrated pump, radiator, and often a reservoir, making it a compact and efficient cooling solution.

Ongoing efforts to enhance the cooling efficiency of one-piece radiators through improved design, materials, and fin density, resulting in better heat dissipation and lower component temperatures.
