One-step chemical plating equipment refers to equipment that can realize the one-step chemical plating process. The equipment controls the chemical reaction in the plating solution to deposit metal ions on the surface of the parts to form a coating. The working principle of one-step chemical plating equipment is mainly based on redox reaction. In the plating solution, metal ions are reduced to metal atoms under the action of a reducing agent, and these metal atoms are deposited on the surface of the parts to form a coating. This process does not require external current, so it has the advantages of simple process, energy saving, and environmental protection.

One-step chemical plating equipment has a wide range of applications in many fields, such as electronics, valve manufacturing, machinery, petrochemicals, automobiles, aerospace and other industrial fields. Especially in the field of electronics, one-step chemical plating equipment is widely used in the preparation of integrated circuit metal connecting wires and new biochip carrier materials.
