## Abstracts

According to our (Global Info Research) latest study, the global One-Stop Digital Asset Service Platform market size was valued at US\$ 2799 million in 2025 and is forecast to a readjusted size of US\$ 6122 million by 2032 with a CAGR of 11.8% during review period.

A one-stop digital asset service platform is a comprehensive platform that aims to provide a comprehensive range of services from digital asset trading, custody, lending, pledging, financial value-added to payment and settlement, to meet users' diverse needs in digital asset management, investment and use. This type of platform simplifies the user's operating process and improves the security and management efficiency of assets by integrating multiple functions. It is suitable for individual investors, institutional investors and corporate users, helping them to operate efficiently in the digital economy.

The one-stop digital asset service platform industry chain can be summarized into three major segments: underlying infrastructure, asset issuance and management, and trading and value-added services. The upstream segment comprises the underlying infrastructure, including the blockchain network, distributed storage, smart contracts, and security encryption technology. This segment boasts a relatively high gross profit margin of approximately 50%-70% due to its high technological barriers and reusability. The midstream segment focuses on asset issuance and management, including digital asset on-chaining, NFT/digital collectible issuance, and asset ownership confirmation and custody services. Its gross profit margin is approximately 40%-60%, depending on the platform's service scale and trading activity. The downstream segment comprises trading and value-added services, including digital asset trading platforms, auctions, staking, lending, cross-chain trading, and data analysis. Its gross profit margin is

approximately 30%-50%, related to transaction fees, traffic, and value-added services. Overall, the industry chain's profits are primarily concentrated in the underlying technology and issuance management segments, while trading and value-added services rely on a high volume of active users and efficient platform operations to boost revenue.

One-stop digital asset service platforms greatly simplify the process of user management and use of digital assets by integrating multiple services such as trading, custody, lending, pledging, and payment, and improve convenience and security. However, with the rapid development of the digital asset market, these platforms are also facing challenges in compliance supervision, technical security, and user privacy. Nevertheless, one-stop service platforms have great potential and advantages in promoting the popularization and application of digital assets and promoting financial innovation, and will play an important role in the future financial ecosystem.
