## Abstracts

According to our (Global Info Research) latest study, the global One-Stop Time Series Database Solution market size was valued at US\$ 3779 million in 2025 and is forecast to a readjusted size of US\$ 20161 million by 2032 with a CAGR of 27.6% during review period.

A one-stop time-series database solution is an integrated database system specifically designed for storing, managing, and analyzing time-series data (such as sensor readings, log data, and financial market data). It typically encompasses functions such as data acquisition, storage, querying, visualization, and alerting, providing end-to-end support from data input to final analysis. Through this one-stop service, users can efficiently process and analyze large-scale, real-time time-series data without the need to integrate different tools. It is widely used in fields such as the Internet of Things (IoT), monitoring, finance, and manufacturing.

The one-stop time-series database solution industry chain primarily includes upstream hardware and infrastructure suppliers (such as servers, storage devices, and network equipment), operating system and cloud platform service providers, and core time-series database software development and algorithm optimization technologies; the midstream involves the research and development, integration, and operation and maintenance services of time-series database products, covering data acquisition, processing, storage, analysis, and visualization functions; the downstream targets application scenarios such as industrial internet, energy, power, IoT, finance, and smart cities, providing end-to-end data management and real-time analysis capabilities. The entire industry chain relies on high-performance computing, data processing algorithms, scalable storage architectures, and industry-specific customized solutions. The gross

profit margin for one-stop time-series database solutions is approximately 48%.

One-stop time series database solutions are gradually becoming the first choice for enterprises and developers who process large-scale real-time data, especially in the fields of IoT, monitoring and financial analysis. It provides complete support from data collection to analysis, greatly simplifying the complexity of the technology stack. With the explosive growth of data volume and the increasing requirements for real-time performance, such solutions help users stay ahead in the highly competitive market through highly integrated architecture, scalable performance and flexible deployment methods. However, as application scenarios become more complex, how to balance performance, cost and security will still be a major challenge in the future.
