One-way degassing coffee valve is a small functional valve specially used on coffee packaging bags. It is designed to allow the carbon dioxide naturally released by coffee beans after roasting to be discharged smoothly from the packaging bag, while preventing external air, moisture or impurities from entering, so as to prevent the coffee from losing its fresh flavor due to oxidation. Usually made of polymer plastic or composite materials, this valve has the characteristics of accurately controlling the exhaust volume and maintaining high air tightness, and can be installed on the coffee bag by heat pressing or self-adhesive bonding.
