## Abstracts

The global One Wheel Electric Scooter market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A 'One Wheel Electric Scooter' usually refers to an electric self-balancing skateboard with a single large wheel at its center. This unique personal transportation device is commonly known as a 'OneWheel' or 'OneWheel Electric Skateboard.'

The OneWheel typically consists of the following components:

**Single Large Wheel:** The large central wheel is the primary feature of the device, which provides stability and propulsion.

**Foot Pads:** On each side of the wheel, there are foot pads for the rider to stand on while riding. These foot pads often have grip tape similar to traditional skateboards.

**Self-Balancing Technology:** The OneWheel employs sophisticated gyroscopic sensors and accelerometers to help the rider maintain balance and stability while riding.

**Electric Motor and Battery:** The wheel is powered by an electric motor, and the device is equipped with a rechargeable battery pack to supply the motor with electricity.

**Control Mechanism:** To control the speed and direction, riders can shift their weight on the foot pads, leaning forward to accelerate and backward to slow down or stop.

OneWheel electric scooters are popular among enthusiasts who enjoy a fun and unique riding experience. They are capable of off-road riding and can handle various terrains,

making them suitable for both urban environments and light off-road trails.
