According to our (Global Info Research) latest study, the global Online Ammonia Nitrogen Analyzer market size was valued at USD 914.8 million in 2023 and is forecast to a readjusted size of USD 1528.5 million by 2030 with a CAGR of 7.6% during review period.

This report focus on Online Ammonia Nitrogen Analyzer market. Treatment facilities use online ammonia nitrogen analyzer

to monitor and control treatment processes.

Ammonia is required to make fertilizers and is usually produced from nitrogen and hydrogen through the Haber-Bosch procedure. Its production using conventional fossil fuel-based processes is responsible for about 1.8% of the global CO₂ emissions. Various researchers from the University of Illinois at Chicago and the University of Minnesota have been experimenting with a new electrolysis method that uses similar amounts of energy as that of the traditional method, thus producing an average of 2.8 tons of CO₂ per ton of NH₃. Moreover, using electricity derived from fossil fuels for the electrolysis process would result in 2.65 tons of CO₂, whereas using renewables the process can have zero carbon emissions. In addition, the researchers are evaluating the possibility of using NH₃ from the air rather than as a source of purified nitrogen gas. This would result in additional greenhouse gas (GHG) savings, as nitrogen gas needs to be purified and bottled.

Furthermore, companies continue to seek out new, low- or zero-carbon investment opportunities. Green hydrogen and NH₃ are expected to be critical contributors to the

world reaching net-zero carbon emissions by 2050. Various industry experts foresee that hydrogen will meet approximately 20% of the world's energy needs by 2050. For instance, in October 2020, CF Industries announced that it would focus on green and low-carbon production, where NH₃ is produced through a carbon-free process. To execute the process, the company has collaborated with technology partners and signed Memorandums of Understanding with Haldor Topsoe and ThyssenKrupp. CF Industries is also in discussion with global utilities and maritime transportation providers to use lowcarbon ammonia directly as a fuel.
