The online continuous emulsifying and dispersing machine is a mechanical equipment specially designed for online and continuous material processing to achieve emulsification, dispersion, homogenization and other functions. It is usually equipped with a special stator and rotor, which generates strong shear force and centrifugal force through high-speed rotation, thereby achieving fine processing of materials. The working principle of this equipment is mainly based on the comprehensive forces of shear, extrusion, friction and impact of materials between special stators and rotors. After the material is evenly sucked into the working chamber, it will be strongly thrown into the narrow and precise gap between the stator and rotor in the fast-flowing liquid. In this process, the material will be subjected to strong shear force and centrifugal force, thereby achieving emulsification, dispersion and homogenization.
