Abstracts

The online correction system is a technical operation tool used to keep the sides of the roll (such as paper, film, metal foil, etc.) neat and consistent during the spraying, printing, die-cutting, lamination, slitting or winding process. This system detects the position deviation of the web through sensors in real time and transmits these signals to the controller. The controller calculates the corrective measures that need to be taken based on the received signals, and adjusts the web through the actuator to return it to the correct position.

According to our (Global Info Research) latest study, the global Online Correction System market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
