Abstracts

According to our (Global Info Research) latest study, the global Online Food Delivery and Takeaway market size was valued at US\$ 32309 million in 2025 and is forecast to a readjusted size of US\$ 58164 million by 2032 with a CAGR of 8.8% during review period.

Online Food Delivery and Takeaway refers to digital food ordering services through which consumers browse restaurants, select menu items, place orders, make payments, and choose instant delivery, scheduled delivery, or in-store pickup through mobile apps, websites, mini-programs, or other digital channels. The market scope includes third-party food delivery platforms, restaurant-operated online delivery, online takeaway pickup, cloud kitchen orders, coffee and beverage takeaway, office meals, and household meal occasions, while excluding grocery quick commerce, packaged food e-commerce, dine-in reservations, and pure errand services. Major markets are concentrated in China, the United States, Europe, India, Southeast Asia, Japan, South Korea, the Middle East, and Latin America, where mobile internet penetration, restaurant density, and digital payment adoption are relatively high.

The global Online Food Delivery and Takeaway market is evolving from online ordering and delivery into an integrated digital infrastructure layer covering delivery, pickup, memberships, advertising, merchant tools, and instant fulfillment. Consumer demand for convenience, certainty, and broader meal choices continues to increase, while mobile payments, intelligent dispatching, order recommendation, digital coupons, membership benefits, and merchant operating systems are becoming more mature. Compared with a pure delivery scope, takeaway and pickup scenarios help reduce fulfillment costs and enable restaurants to capture incremental orders during peak hours, in office districts,

commercial areas, and transport hubs.

At the same time, the market remains constrained by delivery labor costs, courier compliance, platform commission regulation, merchant margin pressure, consumer price sensitivity, and subsidy-driven competition. In mature markets, growth will increasingly depend on repeat purchases, membership conversion, advertising monetization, and higher pickup penetration, while emerging markets will continue to benefit from urbanization, the online migration of small and medium-sized restaurants, mobile payment adoption, and instant-consumption habits among younger users. Over the next few years, leading platforms will compete on unit economics, delivery density, merchant supply quality, fulfillment reliability, low-cost pickup scenarios, and synergy with instant retail. Platforms with strong data capabilities, deep merchant coverage, and localized operations are expected to maintain stronger market resilience.
