Abstracts

The global Online Plasma Cleaner market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Online vacuum plasma cleaning equipment is based on mature plasma cleaning technology and equipment manufacturing, adding automation functions such as loading and unloading, material transportation, etc. For the pre cleaning process of adhesive bonding, chip bonding, and plastic sealing on the lead frame in IC packaging, it greatly improves the performance of bonding and bonding strength, while avoiding secondary pollution caused by long-term contact with the lead frame by human factors and potential chip damage caused by long batch cleaning time of cavity type. The design requirements for automatic material handling of online vacuum plasma cleaning machines reduce manual handling costs and improve equipment automation compared to conventional plasma cleaning systems.
