The global Online Turbidity Meter market size is expected to reach \$ 1420.2 million by 2030, rising at a market growth of 8.6% CAGR during the forecast period (2024-2030).

The online turbidity meter is a very precise turbidity measuring instrument. It is based on the principle of 880nm infrared light source passing through the optical lens and penetrating the sample liquid, and measuring the scattered light in the 90° and 130° directions according to the ISO7072 standard. This online turbidity meter can be used Measure the turbidity of raw or purified water on filtration devices in different places. Such as drinking water, various production and industrial water, and any place where qualified water needs to be used. The product has a compact structure, built-in backlight LCD screen, data memory, and relay control output (3 channels). The turbidity controller outputs a 4~20mA isolated signal to transmit reliable data wherever turbidity needs to be monitored and controlled.
