## Abstracts

The global Onshore Wind Farm market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Onshore wind farms refer to a complete set of facilities that use wind on land to obtain electricity. They are mainly divided into plain wind farms and mountain wind farms. Among them, mountain wind farms are mainly established in the southwestern mountainous areas and are developing very rapidly. Compared with offshore wind power, onshore wind power started earlier and is less difficult to develop, so the proportion of cumulative installed capacity is also larger.

This report studies the global Onshore Wind Farm production, demand, key manufacturers, and key regions.
