According to our (Global Info Research) latest study, the global Onsite Electro-Chlorination Systems market size was valued at US$ 382 million in 2025 and is forecast to a readjusted size of US$ 554 million by 2032 with a CAGR of 5.5% during review period.

Onsite electro-chlorination systems are technologies used to produce chlorine or chlorine-based disinfectants directly at a facility using an electrochemical process. This process involves passing an electric current through a saltwater solution (brine) to generate chlorine gas, which can then be used for water treatment, disinfection, or sanitation. These systems are often employed to provide a safe and convenient source of chlorine without the need to transport or store hazardous chlorine chemicals.
