Abstracts

The global Opacity and Dust Monitor market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Opacity and Dust Monitors use the light transmission technique to measure the visible opacity of exhaust gas in a duct, stack, or flue, in which a high-intensity light beam is projected across the stack. Any dust, smoke, or particulate present will attenuate the transmitted light, and the decrease in light intensity, due to absorption and scattering, is measured.

This report studies the global Opacity and Dust Monitor production, demand, key manufacturers, and key regions.
