Abstracts

The global Open Die Forging Machine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

An open die forging machine, also known as a smith hammer or a flat-die forging machine, is a mechanical press used for forging metal. Unlike closed die forging machines, which use a set of dies to shape the metal, open die forging machines use flat dies that are not fully enclosed. This allows for more flexibility in the shapes and sizes of the parts that can be produced.

This report studies the global Open Die Forging Machine production, demand, key manufacturers, and key regions.
