According to our (Global Info Research) latest study, the global Open Drain I-O Expander market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

I/O expanders are used in conjunction with microcontrollers, microprocessors, or similar devices to increase the number of signal connections available to interface peripherals. A typical working concept involves using serial communication to read/write the state of many input/output pins on an expander device with just a few I/O lines on the host device. The communication speed of this technology is not good, but the connectivity is high, and it is best for applications where fast response is not critical
