## Abstracts

The global Open Fiber Laser Cutting Machine market size is expected to reach \$ 1712 million by 2032, rising at a market growth of 7.1% CAGR during the forecast period (2026-2032).

In 2025, global sales of Open Fiber Laser Cutting Machines reached 8,200 units, with an average selling price of US\$125,000 per unit. Open Fiber Laser Cutting Machines are advanced metal cutting equipment using fiber laser technology, widely used for high-precision cutting of materials such as steel, aluminum, copper, and metal alloys. This equipment achieves fast and precise cutting by focusing a laser beam onto the metal surface, melting or evaporating the metal at high temperatures. The open design provides a larger operating space, suitable for processing large workpieces. Furthermore, the equipment is typically equipped with efficient automation systems and precise motion control technology, offering advantages such as high cutting quality, high cutting speed, high energy efficiency, and low material waste. Open-type fiber laser cutting machines are commonly used in industries such as automotive manufacturing, aerospace, precision machinery, and home appliance manufacturing.

The upstream raw materials for this equipment mainly include fiber lasers, laser lenses, CNC systems, and precision mechanical parts. Downstream demand primarily comes from automotive manufacturing, aerospace, precision machining, and other industrial manufacturing. The industry's total production capacity is approximately 10,000 units per year, with an average gross profit margin of approximately 38%. With the increasing demands for precision machining in global manufacturing and the growing need for automated and intelligent equipment, the application of open-type fiber laser cutting machines in high-end manufacturing will continue to expand. Especially in new energy vehicles, aerospace, consumer electronics, and high-end machinery manufacturing, the

application prospects of laser cutting technology are broad, driving the continuous development and market demand for this equipment.

Open Fiber Laser Cutting Machines are among the most widely used laser cutting equipment in the metal processing industry. Their market development is closely related to the automation upgrade of the manufacturing industry and the increasing demand for metal processing. Compared with traditional plasma cutting and mechanical stamping equipment, fiber laser cutting technology has advantages such as high cutting precision, high speed, small heat-affected zone, and strong material adaptability. Therefore, it is widely used in sheet metal processing, construction machinery, automotive parts, home appliance manufacturing, and metal structural parts processing industries. The open-type structural design makes the equipment more flexible in loading and unloading and processing large-size plates, making it suitable for small and medium-sized processing enterprises and sheet metal processing centers for mass production. Therefore, it occupies a high installed base in the global market.

From the perspective of market demand structure, automotive manufacturing, construction machinery, sheet metal processing, and home appliance industries are the main application areas. In particular, the development of the new energy vehicle industry and the increased demand for processing new metal parts such as battery trays and body structural parts have provided new growth momentum for fiber laser cutting equipment. At the same time, with the continuous decline in laser costs and the technological advancement of domestically produced core components, the overall price of equipment has gradually decreased, further increasing the purchasing willingness of small and medium-sized manufacturing enterprises and driving market expansion. Future industry competition will gradually shift from the sale of single equipment to automated production lines and intelligent manufacturing solutions. Equipment will increasingly integrate automated loading and unloading, intelligent layout, and remote operation and maintenance functions to improve production efficiency and equipment utilization. Overall, against the backdrop of the global manufacturing industry's transformation towards digital and flexible production, open-type fiber laser cutting machines will maintain steady growth and continue to unlock new market opportunities in sheet metal processing and intelligent manufacturing.
