Abstracts

According to our (Global Info Research) latest study, the global Open Fit for Hearing Aids market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

The 'open' refers to the earpiece not fitting tightly inside your ear canal, unlike the older style BTE's, CIC's, ITC's and ITE models. This type of earpiece is much smaller, softer and therefore more comfortable. This style of hearing aid is more commonly successful with those who have mild to moderate hearing loss which do not obstruct the ear canal like traditional hearing aids, giving you a more natural sound experience and an 'open' feeling. The sound and air can still enter your ear as normal, whilst amplified sound from your hearing aid goes through the tip.
