According to our (Global Info Research) latest study, the global Open flare system market size was valued at US\$ 1062 million in 2024 and is forecast to a readjusted size of USD 1925 million by 2031 with a CAGR of 8.2% during review period.

Open flare systems are combustion devices in which the main flame is located atop a flare stack, open to the atmosphere, and visible to the surrounding areas. Open flares are typically able to accommodate larger waste gas flows than enclosed combustion devices but cannot achieve destruction removal efficiencies (DRE) as high as enclosed systems. Open flare systems ensure safe and stable combustion in a wide range of gas and vapor flows.
