Open floor deck is a type of floor deck commonly used in building structures. It is usually made of metal (such as steel) or concrete materials and has strong load-bearing capacity and good compressive resistance. A key feature of the open floor deck design is that there are certain openings or holes on the board surface. These openings make it have better water permeability and ventilation, while also reducing the weight of the board and reducing material costs.

This report is a detailed and comprehensive analysis for global Open Floor Decking market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Type and by Application.
