## Abstracts

According to our (Global Info Research) latest study, the global Open Heel Nursing Clogs market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A nurse is constantly on their feet attending to patients, administering their medication – either orally or via intravenous lines, keeping medical records or assisting doctors. It would not be surprising if they spend more than half the day standing. They need footwear which is comfortable, provides them enough support for the long shifts they work, both during the week and extra shifts. Some shoes are explicitly designed for this purpose and are often given to nurses as part of their hospital uniform. The four main types of shoes worn by nurses include clogs, casual shoes and athletic trainers. The clog market can be broadly classified into two types on the basis of design – the open heel nursing clogs market and the closed heel one.

Clogs have been made very popular due to the efforts of major companies operating in the open heel nursing clogs market. They are very common since they are spacious, comfortable, provide pain relief via targeting pressure points, and they promote good gait and posture. They are also advised for those bunions who are experiencing some deformity, or those who have worn poorly fitted footwear for several years. Nursing clogs have always been popular throughout history and it is expected that they continue to remain so for the foreseeable future.
