Open-source intelligence (OSINT) is data collected from publicly available sources to be used in an intelligence context. In the intelligence community, the term 'open' refers to overt, publicly available sources (as opposed to covert or clandestine sources).

Colloquially, the collection and correlation of information using Open Source Intelligence (OSInt) tools is known as OSInt. This information can be in various forms, such as audio, video, image, text, file, etc.

As technology continues to evolve, the role of open source intelligence tools is changing from simple data providers to data-driven decision makers. This transformation will further improve the efficiency and accuracy of decision-making, making open source intelligence tools more competitive in future development. However, the development of open source cyber intelligence tools also presents some challenges. For example, data security and privacy issues, information authenticity and reliability issues, and excessive collection and use of information, etc. Therefore, in future development, it is necessary to strengthen the management and regulation of these issues to ensure the healthy development of open source network intelligence tools.
