Abstracts

Open Source Large Language Models (LLMs) refer to large language models that are developed using open-source principles and are freely available for public use, modification, and distribution. Open-source LLMs play a crucial role in democratizing access to advanced natural language processing (NLP) technology. By making the models openly accessible, developers, researchers, and enthusiasts can leverage them to build new applications, conduct experiments, and advance the state of the art in NLP without the barrier of expensive proprietary models. These models are typically built upon transformer architectures and pre-trained on vast amounts of text data, enabling them to understand and generate human language.
