Abstracts

The global Open Tunnel Boring Machine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The market prospects for Open Tunnel Boring Machines are promising, primarily driven by the increasing demand for efficient and cost-effective tunnel excavation in soft ground conditions. These machines offer advantages such as continuous excavation, quick removal of excavated soil, and suitability for stable soil conditions with minimal groundwater. The growing demand for utility installations, sewer construction, and small-scale tunneling projects further fuels the market for Open TBMs. Additionally, ongoing urbanization projects and infrastructure development in emerging economies present significant growth opportunities. As governments and construction companies seek faster and safer tunneling solutions, the demand for Open TBMs is expected to rise, contributing to their positive market prospects.

The Open Tunnel Boring Machine is a type of tunneling equipment used to excavate tunnels in soft ground or loose soils. Unlike other tunnel boring machines that operate within a closed cutterhead, the Open TBM has an open-faced cutterhead that allows for continuous excavation and removal of the soil. As the machine moves forward, it uses cutting tools to break the soil, and then the excavated material is transported through a conveyor belt or auger system to the surface. This method is suitable for tunnels with minimal groundwater or stable soil conditions. Open TBMs are commonly used in utility installations, sewer construction, and small-scale tunneling projects.

This report studies the global Open Tunnel Boring Machine production, demand, key manufacturers, and key regions.
