Abstracts

The global Open-type Bagging Machine market size is expected to reach \$ 3319 million by 2032, rising at a market growth of 5.8% CAGR during the forecast period (2026-2032).

In 2025, global sales of Open-type Bagging Machines reached 68,000 units, with an average selling price of US\$32,000 per unit. Open-type Bagging Machines are packaging equipment used for automatically metering, filling, and clamping or conveying bag openings for powders, granules, or small lumps. They are suitable for automated bagging processes using pre-made open-face bags. The equipment typically consists of an automatic bag feeding device, a weighing and metering system, a material feeding mechanism, a bag clamping device, a conveying system, and an electrical control system. It can realize functions such as quantitative filling, automatic bag clamping, filling, and conveying, and features high metering accuracy, high automation, and a wide range of applicable materials. It is widely used in bulk material packaging production lines in industries such as fertilizers, grains, feed, cement, chemical raw materials, and plastic granules. Upstream raw materials mainly include carbon steel or stainless steel structural components, weighing sensors, PLC control systems, motor reducers, and pneumatic components. Upstream suppliers are mainly steel processing companies, industrial automation manufacturers, and sensor manufacturers. The global industry's total production capacity is approximately 90,000 units, with an average gross profit margin of approximately 23%. With the increasing demands for automation in bulk packaging and logistics efficiency, open-type bagging machines are upgrading towards higher speeds, greater intelligence, and compatibility with multiple materials. Market opportunities for equipment upgrades and automation transformation still exist in the fields of grain processing, fertilizer production, and new material pellet packaging.
