Abstracts

The global Open-Type Fin Press Line market size is expected to reach \$ 570 million by 2032, rising at a market growth of 3.9% CAGR during the forecast period (2026-2032).

Open-Type Fin Press Line is an automated fin stamping production line built around an open-frame press structure, used for coil unwinding, feeding, punching, forming, cutting, and stacking in heat exchanger fin manufacturing. Compared with closed-frame lines, its advantage lies in more open operating space, easier die access, faster specification changeover, smaller equipment footprint, more convenient maintenance, and stronger suitability for medium-speed, multi-specification, and cost-sensitive fin production. In 2025, production was 14,000 units and the average price was USD 30,000 per unit. The industry's capacity utilization rate in 2025 was about 65%, and the average gross margin was around 23%. Upstream, the key inputs include alloy steel, ball screws, servo motors, linear guides, and controllers, with representative suppliers such as Baowu Steel Group, THK, and Yaskawa Electric providing steel materials, precision transmission components, motion-control parts, and control systems. The midstream segment focuses on open-frame press structure design, progressive die matching, automatic unwinding and feeding control, punching and forming process integration, servo motion coordination, cutting and stacking mechanism assembly, line synchronization, precision calibration, safety protection, reliability testing, and final line commissioning, which together determine operating accessibility, forming accuracy, feeding stability, mold adaptability, automation level, maintenance efficiency, and cost competitiveness. Downstream, Open-Type Fin Press Line is mainly used in air-conditioning and refrigeration equipment as well as automotive heat exchanger production, where it supports fin manufacturing for evaporators, condensers, radiators, and other heat exchange components, with representative customers including Midea Group, Gree Electric Appliances, and Denso.

Open-Type Fin Press Line demand will be shaped by manufacturers that value production flexibility, accessible operation, and lower equipment burden over maximum press rigidity. In air-conditioning and refrigeration equipment, it is suited to fin lines with varied specifications, moderate output requirements, and frequent mold adjustment. For automotive heat exchanger production, its role is more practical in prototype runs, auxiliary capacity, replacement lines, and mixed-model production where fast setup matters. As factories balance automation investment with operating cost, buyers will focus on open access, die change speed, feeding accuracy, maintenance convenience, controller stability, and acceptable forming consistency under flexible production.
