Abstracts

According to our (Global Info Research) latest study, the global Open Water Chiller market size was valued at US$ 3309 million in 2025 and is forecast to a readjusted size of US$ 4416 million by 2032 with a CAGR of 4.3% during review period.

In 2025, the global production of open water chillers reached 918,800 units, with an average selling price of 3,500 USD per unit. The global annual production capacity of open water chillers is approximately 1.5 million units, and the gross profit margin is about 28.3%. An open water chiller is a cooling device mainly used in industries, manufacturing, and laboratories to lower the temperature of equipment or processes by circulating cooling water or other cooling media. The upstream of open water chillers includes carbon steel, compressors, and heat exchangers, among others. The midstream consists of open water chiller manufacturers, while the downstream is primarily applied in industries such as industrial, mechanical, and medical sectors.

Currently, the global market for open water chillers is maintaining a generally steady development trend. Sustained demand for process cooling from downstream application fields such as industrial production, mechanical manufacturing, medical equipment, and laboratory research provides a stable market foundation for this type of equipment. On the technological front, products are continuously evolving towards higher energy efficiency, the application of environmentally friendly refrigerants, and intelligent control, while users also place greater emphasis on operational reliability and ease of maintenance. However, the industry also faces common challenges including fluctuations in raw material costs, increasingly stringent energy efficiency standards, and intensifying homogenized competition. Overall, the market demonstrates strong adaptability, with technological innovation and continued expansion of application
