Operating theatre disposable supplies refer to single-use medical items, instruments, equipment, and consumables that are used during surgical procedures and other medical interventions in operating rooms. These disposable supplies are crucial for maintaining a sterile environment, preventing infection, and ensuring the safety and well-being of both patients and healthcare professionals. They are designed for one-time use and are disposed of after each surgical procedure to reduce the risk of contamination and cross-infection.

Key types of operating theatre disposable supplies include:

Surgical Drapes and Gowns: These are protective covers worn by surgical personnel

and used to isolate the surgical site from the rest of the body and maintain a sterile field.

Gloves: Disposable gloves are worn by surgical and healthcare personnel to prevent contamination and protect against exposure to blood, bodily fluids, and pathogens during surgical procedures.

Masks and Respirators: Surgical masks and respirators are worn by healthcare professionals to protect against respiratory droplets and maintain a sterile surgical environment.

Surgical Sponges and Towels: Disposable sponges and towels are used for various tasks during surgery, such as cleaning, absorbing fluids, and maintaining a dry surgical field.

Surgical Instruments: Certain surgical instruments are designed for single-use and are disposed of after a single surgery to ensure sterility and prevent potential infections.

Wound Dressings: These include sterile dressings and adhesive bandages used to cover surgical incisions and wounds, aiding in the healing process and preventing infection.

Catheters and Tubing: Disposable catheters and tubing are used for various medical procedures, such as administering medications, draining fluids, or monitoring vital signs.

Suction Tubes and Canisters: Disposable suction tubes and canisters are used to remove excess fluids and secretions from the surgical site during procedures.

Needles and Syringes: Single-use needles and syringes are essential for administering medications, drawing blood, and various medical procedures.

Sterile Swabs and Applicators: Sterile swabs and applicators are used for wound cleaning, sample collection, and other medical purposes, ensuring a sterile environment.

Waste Disposal Bags and Containers: Disposable bags and containers are used to dispose of medical waste generated during surgical procedures in a safe and hygienic manner.
