Abstracts

According to our (Global Info Research) latest study, the global Operational Database Management market size was valued at USD 45270 million in 2023 and is forecast to a readjusted size of USD 54480 million by 2030 with a CAGR of 2.7% during review period.

Operational database management systems are used to update data in real-time. These types of databases allow users to do more than simply view archived data. Operational databases allow you to modify that data (add, change or delete data), doing it in real-time. OLTP databases provide transactions as main abstraction to guarantee data consistency that guarantees the so-called ACID properties. Basically, the consistency of the data is guaranteed in the case of failures and/or concurrent access to the data.

The growing role of operational databases in the IT industry is moving fast from legacy databases to real-time operational databases capable to handle distributed web and mobile demand and to address Big data challenges. Recognizing this, Gartner started to publish the Magic Quadrant for Operational Database Management Systems in October 2013.

The Global Info Research report includes an overview of the development of the Operational Database Management industry chain, the market status of Data Formatting (Hardware, Software), Data Validation (Hardware, Software), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Operational Database Management.
