Abstracts

The operational database management system (OPDBMS) market is defined by relational and nonrelational database management products suitable for the traditional transactions used to support business processes. These include a broad range of enterprise-level applications — both purchased business applications, such as ERP and CRM applications, and custom-made transactional systems. Our definition of this market also includes DBMS products that support interactions and event processing (data in motion) uses for the Internet of Things (IoT). OPDBMSs may support multiple different delivery models, such as stand-alone DBMS software, cloud (public and private) images or containerized versions, certified configurations and database appliances.
