Abstracts

The global Operational Due Diligence (ODD) market size is expected to reach \$ 1886 million by 2032, rising at a market growth of 8.0% CAGR during the forecast period (2026-2032).

Operational due diligence refers to an in-depth review and assessment of a target company's core business processes and operational effectiveness prior to a merger, acquisition, investment, or collaboration. It goes beyond financial data and aims to provide an in-depth analysis of the sustainability of its business model and its operational strengths and weaknesses. The core assessment scope includes supply chain and manufacturing systems, technological R&D capabilities and intellectual property, IT systems and data security, sales and marketing channels, customer satisfaction and market share, environmental, social, and governance (ESG) risks, and the capabilities of the management team. Its ultimate goal is to provide investment decisions with key insights into the target company's true operating conditions and future profit potential, identify potential execution risks and synergy opportunities, and provide an action blueprint for post-transaction integration planning.

With the continued growth of global private equity funds, private lending, infrastructure investment, and cross-border M&A activities, the importance of operational due diligence has significantly increased, evolving from a traditional 'risk identification tool' to a 'core module for value creation and investment decision-making.' In the future, ODD will become more data-driven, systematic, and technologically advanced, with AI, data analytics, automated auditing tools, and real-time operational monitoring significantly enhancing the depth and efficiency of due diligence. Simultaneously, against the backdrop of increasingly stringent regulations and the rise in complex cross-border transactions, investors' demand for operational risk identification is constantly

increasing, leading to a continued strengthening of the role of ODD in private equity investment screening, M&A transaction risk pricing, and post-investment integration. It is expected to become one of the fastest-growing segments in the global asset management and transaction advisory market.
