## Abstracts

According to our (Global Info Research) latest study, the global Ophthalmic Consumables market size was valued at US\$ 34722 million in 2025 and is forecast to a readjusted size of US\$ 54547 million by 2032 with a CAGR of 6.6% during review period.

Ophthalmic Consumables refer to a broad category of single-use or short-term medical devices and products designed for the diagnosis, treatment, and correction of eye disorders, as well as for supporting ophthalmic surgical procedures and daily vision care; this category includes contact lenses, intraocular lenses (IOLs), surgical sutures, ophthalmic viscoelastic devices, eye drops, diagnostic strips, and disposable surgical instruments, characterized by strict biocompatibility standards, sterile packaging, and direct application to the ocular region to ensure safety and efficacy in clinical and consumer scenarios.

The global demand for ophthalmic consumables is driven by the aging population's rising prevalence of cataracts and age-related macular degeneration, the growing incidence of myopia among adolescents, the expansion of ophthalmic surgical volumes, and the increasing consumer focus on vision health and cosmetic contact lenses; business opportunities lie in developing high-performance, minimally invasive surgical consumables (e.g., premium foldable IOLs and injectable viscoelastics), innovating sustainable and personalized vision correction products (e.g., custom orthokeratology lenses), expanding access to affordable consumables in emerging markets, and integrating smart technologies for real-time monitoring of ocular health to enhance product value and market competitiveness.
