Ophthalmic excimer laser equipment is a high-precision medical device used to correct refractive errors (such as myopia, hyperopia and astigmatism). It uses excimer laser technology to accurately reshape the cornea to improve vision. The device emits short pulses of ultraviolet laser to remove a small amount of tissue on the surface of the cornea, change the curvature of the cornea, and enable light to focus accurately on the retina. Excimer laser equipment is widely used in refractive surgeries such as LASIK and LASEK, and is currently one of the most common and safest means of vision correction.
