Abstracts

The global Ophthalmic Hard Multi Coating market size is expected to reach \$ 6409 million by 2032, rising at a market growth of 6.3% CAGR during the forecast period (2026-2032).

Ophthalmic hard multi coating is a functional multilayer coating system applied to the surface of optical resin spectacle lenses. It typically combines a hard coat, adhesion layer, multilayer anti-reflective stack, hydrophobic and oleophobic top coat, anti-smudge layer, anti-static layer, UV-protective layer and, in some cases, blue-light management functions. The manufacturing process generally includes lens cleaning, primer application, dip or spin hard coating, thermal or UV curing, vacuum deposition of AR layers, ion-assisted deposition, top-coat treatment and quality inspection. The main purpose is to improve scratch resistance, reduce surface reflections, increase light transmission, minimize glare and ghost images, improve cleanability and extend lens service life. HMC is commonly used as a standard or mid-tier coating for spectacle lenses, while SHMC, super hydrophobic AR, ultra-low-reflection AR, anti-static AR, blue-cut HMC and back-side UV protection represent higher-value configurations. The coating is usually sold as part of finished or semi-finished spectacle lenses, prescription-lab processing or branded lens coating packages rather than as a standalone consumer product.

In 2025, the global production volume of ophthalmic hard multi coating is projected to reach 1.42 billion units, with an average price of \$2.86 per unit and an average gross margin of 41.2%.

From a supply perspective, the market consists of branded ophthalmic lens companies, regional lens manufacturers and coating-process equipment providers. International

lens companies such as EssilorLuxottica, HOYA, ZEISS, Nikon, Rodenstock, SEIKO, Tokai and Shamir differentiate through branded coating platforms such as Crizal, Super Hi-Vision, DuraVision, SeeCoat, Solitaire, SRC, ProGuard and Glacier. Chinese and Korean manufacturers such as Conant, Mingyue, Wanxin, Hongchen, Chemilens, Universe Optical and Seto serve large-volume finished, semi-finished and Rx lens demand using HMC, SHMC, UV400, blue-cut and super-hydrophobic coating options. Equipment and process providers such as Satisloh, Buhler Leybold Optics and Schneider support lens labs with hard-coating, AR-coating and mirror-coating systems.

Demand growth is driven by the shift from basic prescription lenses to value-added coated lenses. Consumers increasingly view anti-reflective, scratch-resistant, easy-clean, UV-protective and blue-light-management coatings as practical features rather than optional decoration. Higher-index lenses, progressive lenses, photochromic lenses, driving lenses, digital-use lenses and myopia-management lenses also require more reliable surface protection and optical clarity. Nikon describes SeeCoat Plus as an AR coating that is scratch-resistant, oil- and smudge-repellent and UV-protective, while ZEISS positions DuraVision coatings around anti-reflective performance, scratch resistance and easier cleaning.

From a technology perspective, HMC has evolved from basic hard coat plus green residual AR coating toward multifunctional coating stacks. Standard HMC focuses on anti-reflection and scratch resistance. SHMC adds stronger hydrophobic, oleophobic and easy-clean properties. Blue-cut HMC combines coating design with blue-light management. UV400 and back-side UV coatings improve all-direction UV protection. Premium low-reflection coatings focus on lower residual reflectance, more neutral residual color and better durability. HOYA notes that individual coating layers are engineered to work together, while Tokai describes coating options that include multi-coating, UV-cut, scratch resistance, stain prevention, anti-fog and mirror functions.
