The ophthalmic YAG laser system is a medical device specially designed for ophthalmic surgery. It uses yttrium aluminum garnet (YAG) crystal as the working medium to generate laser beams. This laser usually emits near-infrared light with a wavelength of 1064 nanometers. It has the characteristics of high energy density and precise focusing, and can perform small and accurate operations on the eye structure without damaging the surrounding tissue. YAG laser systems are widely used in the treatment of various ophthalmic diseases, especially in the fields of cataract surgery complications, glaucoma and retinopathy.
