Optical adhesives are special adhesives used to bond optical components (such as lenses, prisms, filters, displays, etc.). They are required to have high light transmittance, low refractive index difference, low curing shrinkage, weather resistance and chemical stability to ensure that the performance of the optical system is not affected. Sealants are materials used to fill gaps and prevent leakage or intrusion of foreign substances. They usually have good adhesion, elasticity and weather resistance. In the field of optics, sealants are mainly used to protect optical components from moisture, dust or chemical erosion, while providing mechanical support.
