Abstracts

According to our (Global Info Research) latest study, the global Optical Bypass TAPs market size was valued at US\$ 138 million in 2025 and is forecast to a readjusted size of US\$ 207 million by 2032 with a CAGR of 6.1% during review period.

An optical bypass TAP, sometimes referred to as a Bypass Switch, has consistent heartbeats that are sent to an inline security appliance. These heartbeats indicate the functionality of the security appliance: regular beats mean the bypass TAP is functioning well. If the beats are not returned to the bypass TAP (see below) the TAP automatically bypasses the appliance to allow the packets to be sent through, no matter how high the traffic is. It is also able to detect the status of the appliance, so when it comes back online, this is detected by the TAP and traffic is once again directed through the appliance.?
