An OCR (Optical Character Recognition) Scanning Service is software that automatically recognizes text contained in images and converts it into a format that can be processed by a computer. OCR Scanning Service engines play an important role in many areas, including information digitization, document management, automated processes, and search engine indexing. They not only reduces the time and errors of manually entering text, but also improves productivity and accuracy. However, services are not perfect. Human correction is necessary, as handwriting, certain typefaces, and image quality can reduce recognition rates.
