## Abstracts

The global Optical Communication Adhesives market size is expected to reach \$ 777 million by 2032, rising at a market growth of 24.8% CAGR during the forecast period (2026-2032).

Optical communication adhesives are high-performance adhesive materials specifically designed for the optical communication field. They are primarily used for fixing and sealing critical components in fiber optic connections, optical module packaging, and other optical communication equipment. These adhesives typically possess extremely high light transmittance, excellent UV resistance, and high-temperature resistance to ensure that optical signals are not interfered with during transmission. Furthermore, optical communication adhesives must have a low coefficient of thermal expansion to prevent deformation or loosening of optical components due to temperature changes. In practical applications, these adhesives are widely used in the assembly and sealing of fiber optic connectors, fiber optic arrays, fiber lasers, and other precision optical components, ensuring stable and reliable operation in long-term, high-frequency working environments. With the continuous development of optical communication technology, the role of optical communication adhesives in improving equipment performance and extending service life is becoming increasingly important.
