Abstracts

According to our (Global Info Research) latest study, the global Optical Emission Spectrometry (OES) Analysis Services market size was valued at US\$ 802 million in 2025 and is forecast to a readjusted size of US\$ 1206 million by 2032 with a CAGR of 6.0% during review period.

To address the urgent need for rapid, non-destructive, multi-element on-site analysis of solid metal samples in metal smelting, casting, mechanical manufacturing, and material quality control processes, and to overcome the limitations of traditional laboratory analysis, which is time-consuming and complex and cannot meet the needs of real-time decision-making on the production line, optical emission spectrometry (OES) analysis services have emerged. Since the practical application of core components such as photomultiplier tubes and spectrometer technology in the mid-20th century, the field of rapid on-site elemental analysis of metal materials has entered a new stage of development. Currently, OES analysis services have developed into an integrated solution providing everything from rapid on-site screening to precise laboratory measurements, utilizing various devices such as handheld, mobile, and desktop direct-reading spectrometers. It is widely used in industries such as steel, non-ferrous metals, aerospace, automotive manufacturing, pressure vessels, and scrap metal recycling, enabling qualitative and quantitative analysis of multiple metal elements within seconds. This provides immediate and reliable data support for material identification, grade confirmation, process control, and incoming material inspection, making it a key on-site analysis technology for ensuring product quality and production efficiency.
