## Abstracts

According to our (Global Info Research) latest study, the global Optical Fiber for Car Atmosphere Light market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The use of optical fiber in automotive ambient lights refers to the use of glass fiber optic light guides to replace plastic tubes, making ambient lights smaller in diameter, narrower in bending radius, and better resistant to ultraviolet light, temperature, and chemicals. Refined lines of light create a new signature design on the exterior and interior of the car. At present, the optical fibers used in ambient lights are divided into two categories: glass optical fibers and high-performance polymer optical fibers. The glass fiber optic light guide strip is a soft light guide composed of many glass optical fibers bundled together. The polymer light guide strip is made of special acrylic as the inner layer and fluororesin as the outer layer, and the two materials are co-extruded. Polymer light guide strips are generally made of transparent and soft materials such as PS, PE, and TPU.

The industrial chain of optical fiber for automotive ambient lights includes upstream car light component suppliers, midstream car light suppliers, and downstream OEMs. The boundary between upstream and midstream is relatively blurred, and midstream suppliers will join the business scope of upstream module suppliers as demand increases. However, when OEMs enter the bureau to develop self-developed lamps, they will also intervene in the business scope of the upstream and midstream, resulting in the overlap of upstream and downstream businesses. The development trend of automotive ambient lights will become more and more intelligent and humanized. High-quality automotive ambient lights have become a design element that cannot be ignored

in the field of automotive interiors. It will be more and more applied to ordinary cars and become the standard equipment of cars. The field of optical fibers for automotive ambient lights will also usher in broad development prospects.
